DETAILED ACTION

1. This action is responsive to communications of application filed 12/20/2004.
2. The disposition of the claims is as follows: claim 27 is pending in the application.

Claims 1-26 were cancelled.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lewis, (US Patent Publication 20020065752 A1), and further in view of Strobe et al., (US Patent 5,129,057), hereinafter Strobe.

A. Lewis discloses claim 27, "A method of displaying information relating to a workflow driven by a computer system comprising: executing the workflow, the workflow implementing business rules [para. 0033, 0070, 0075, 0081 and claim 7]; calculating execution statistics relating to the execution of the workflow on the computer system [para. 0096, 0101, 0102]; displaying a workflow diagram on a display screen associated with the computer system [para. 0132 – 0135, 0138, 0143, 0147, 0151, 0154 and claim 7]; and overlaying the execution statistics on the workflow diagram [para. 0069], wherein the execution statistics are for various steps displayed in the workflow diagram [para. 0016, 0072, 0095, 0096, 0098 and claim 7], and

Art Unit: 2676

wherein the execution statistics are selectively displayed by positioning a pointer over the display” as [detailed]. However Lewis does not appear to disclose “wherein the execution statistics are selectively displayed by positioning a pointer over the display”, but Strope does in [col. 5, lns. 1-14 and lns. 56-61; col. 7, lns. 43-45].

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to apply an integrated financial data reporting system provides for real time data entry, assessment, and report generation disclosed by Lewis in combination with selective displaying via mouse pointer positioning disclosed by Strope, and motivated to combine the teachings because it would allow a user to view the event directly as revealed in col. 5, lines 56-61.

Response to Arguments

5. In congruence with previous advisory action an updated search has revealed lack of novelty as indicated supra.

Applicant's arguments with respect to claim 27 has been considered but is moot in view of the new ground(s) of rejection.
